

### A New configurations

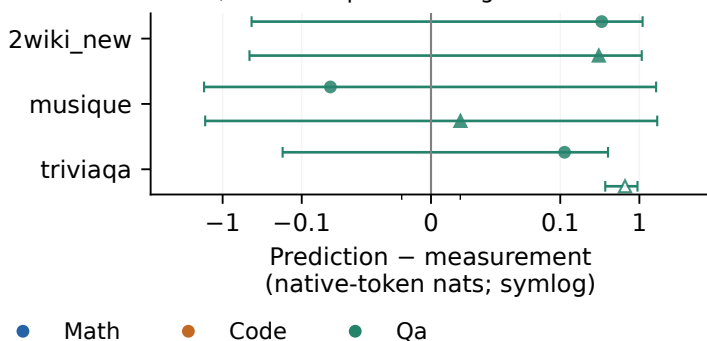

### B New sources or students

### C New evaluation distributions

Additive contrast: 1B circles; 4B development triangles

Filled circle: within stated band; hollow circle: outside;  
triangle: development student; cross: interval not tested.

Whiskers: stored measurement bands (corner  $l \pm$  twice registered noise).

Missing intervals remain unclassified. Primary QA corner additivity:  
failed to reject; full response transfer to fresh distributions: not tested.
